WORK EXPERIENCE

Software Engineer

Optum Global Solutions, United Health Group

04/2024 - Present

Gurugram

Achievements/Tasks

- **MOOP Application for claims processing:** Engineered pivotal components for the MOOP (Member Out of Pocket) claims platform. With the daily influx of traffic escalating to **one million records** in 2024, I proactively pinpointed and **addressed system bottlenecks**, refining features previously deployed to the Production environment.
- **Worked to resolve critical/high vulnerabilities:** Actively engaged in analyzing and mitigating critical and high-severity vulnerabilities within the system. Involved conducting thorough security assessments, implementing robust solutions, and collaborating with cross-functional teams to ensure the integrity and security of the project.
- Strategic **performance optimization** of code and queries culminated in a **50% reduction** in claims processing time.
- **Production support:** Actively involved in resolving Production Incidents and Problem tickets.
- **Mentoring:** Responsible for guiding new team members to help them effectively integrate and begin contributing to project work.

Associate Software Engineer II

Optum Global Solutions, United Health Group

08/2020 - 03/2024

Gurugram

Achievements/Tasks

- **MOOP: Member Out of Pocket (Migrating legacy claims processing):** Designed and developed Spring Boot + Angular application (with 90% line and branch test coverage) for claims processing in Medicare and Retirement Claim Platform (MRCP). Revamped the existing functionalities along with addition of numerous features and enhancements to boost productivity by 20%. Resulted in enhanced business user experience.
- **MRCP Authentication and Authorization Library:** Designed and developed an Angular library, tailored for seamless integration with any Angular-based application, to facilitate MRCP Authentication and Authorization processes. The library offers **intuitive functionalities**, user-centric dialogs, and **streamlines navigation** across multiple tabs. It has notably **streamlined the authentication process** for approximately **20 teams** within the MRCP ecosystem.
- **Technologies Used:** Java/ Spring Boot, Angular 10, MySQL, JUnit, Karma, Kubernetes, Apache JMeter, Kafka.

PERSONAL PROJECTS

Fine Grained Named Entity Recognition for Code Mixed Text (01/2020 - 04/2020)

- Developed a Named Entity Recognizer for Indian Entities scraping data from Wikipedia. List of Indian Entities (Names, Organization, Cities) are extracted to get labelled text. Annotated data then used for training the model and testing a random sentence for Entities.

EDUCATION

Bachelor Of Technology (Computer Engineering)

Faculty of Engineering and Technology, Jamia Millia Islamia

07/2016 - 05/2020
